

DISTRIPORT

Project: Distriport
Client: Distriport Noord Holland developers
Location: Koggenland - The Netherlands
Area: 161 ha.
Duration: 2009-2010
Status: Ratified.
Partners: OKRA landscape architects, BRO consultants

Urban plan and design public space for new industrial area, combining all buildings into a solar power plant and water machine.

In stead of boxes visually polluting the landscape, a dyke (common in this landscape) covers all the around the visual noise of the bottom 6m. Strict architecture rules for all that sticks out.

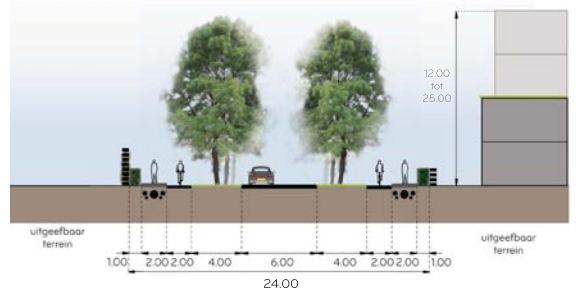

Design concept

1. All public space to the frame, for ecology, recreational use
2. Green dykes to fit in the landscape
3. Clear and efficient, rectangular layout inside
4. Water and energy machine

Sustainability concept

Roofs of the industrial buildings together form a solar power plant and rainwater machine.

Profiles for the main roads and highway side.
